

Door Mount Install Instructions for Inward opening door (Page 1 of 2)

****Remove Cover from Operator before beginning installation****

NOTE: For both Model 133 & Model 233 Operators, mount operator at 4" away from the hinges and mount the arm at 13" from hinges.

For Electric Strike Installation refer to separate instructions included with the strike

Inside view

1. Operator will need to be on the top corner closest to the hinges

2. Before beginning, secure door so it does not move during installation and set up your ladder/stool.

3. On the door measure 4" away from the hinges and create a mark. This is where the operator will need to be positioned.

On the door jamb measure 13" and create a mark. This is where the middle of your arm will need to be positioned (surface that arm will be mounted on must be as vertical as possible).

4. Once you have the measurements down, position the operator and screw into position.

Door Mount Install Instructions for Inward opening door (Page 2 of 2)

5. Line up the arm with marking you did on the door jamb so that the middle of the shoe is position where the mark is, then screw into place. Do NOT mount arm shoe too high above operator because it will cause binding of joints leading to screws falling off.

6. With the door closed, adjust the arm to 90 degrees.

7. After setting up the correct adjustment tighten the arm.

8. Strike Connection: Connect Green and Yellow wires from phone jack to strike.

Power Connection: Red & Black cables need to run from phone jack to transformer. Transformer is then plugged in to 120VAC wall outlet.

9. Plug in Strike Tester to RJ-11 phone jack to test electric strike, you should hear a buzzing sound coming from the strike (Do NOT connect any wires to this tester).

10. Connect the operator to the phone jack. Turn unit on and move on to page 9.
